

RealAcoustix Fabric Wrapped Panel Maintenance

The following is provided as general maintenance information for all RealAcoustix fabric wrapped products. Please note that care should be taken to follow the directions carefully:

Fabric Wrapped Panels (RealAB, RealHIR, BassBox, Etc.)

Vacuuming and/or light brushing is recommended on a regular basis to prevent dust or grime build up that can stain.

For spots that are not removed by vacuuming and/or light brushing a dry wall sponge is recommended. These can be purchased at most hardware stores. (Absorene Dry Wall Sponge is one example). Follow instructions on dry wall sponge package carefully. We recommend testing product on a small inconspicuous area at first. Do not wet product or water stains will occur. In most cases these water stains cannot be cleaned.

If stains are not removed with the above methods. Panel replacement is recommended.
